. מצא חסם תחתון לשונות של אומד ל- λ , פרמטר של התפלגות פואסון.

$$\int u f(x) = \int u \left(\frac{x_i}{s_{-j}}\right) = \int u \cdot S_{-j} + \int u \int u - \int u x_i = -y + x \int u y - \int u x_i$$

$$f(x) = \int u \int x_i$$

$$f(x) = \int u \int x_i$$

$$f(x) = \int u \int u \int x_i$$

$$f(x) = \int u \int u \int x_i$$

$$\frac{d\ln f(x)}{dx} = -1 + \frac{x}{x}$$

$$\left(-\sqrt{+\frac{y}{x}}\right) = \frac{y_2}{x_3} - \frac{y}{3x} + 1$$

$$\frac{d\ln f(x)}{d\lambda} = -1 + \frac{\chi}{\lambda}$$

$$(-1 + \frac{\chi}{\lambda}) = \frac{\chi^2}{\lambda^3} - \frac{2\chi}{\lambda} + 1$$

$$E\left(\frac{\chi^2}{\lambda^3} - \frac{2\chi}{\lambda} + 1\right) = \frac{1}{\lambda^3} \cdot E(\chi^3) - \frac{2}{\lambda} \cdot E(\chi) + 1$$

$$E(X_g) = \Lambda \alpha \iota X + (E(X_g)) = V + Y_g = V(Y + V)$$

$$\frac{1}{\sqrt{2}} \cdot \chi(1+\overline{\lambda}) - \frac{2}{\lambda} \cdot \chi + 1 = \frac{1+\overline{\lambda}}{\lambda} - 1 = \frac{1}{\lambda} + 1 - 1 = \frac{1}{\lambda}$$

$$\frac{U \cdot V}{V} = \frac{U}{V} = \frac{U}{V}$$
